Racie LA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a secreted protein. The polymucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polymucleotide is also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotides encoding secreted human proteins - derived from

activities. (I) can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease, accidental damage or genetic disorders. (I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of the treatment of nerve and brain tissue and is useful for the treatment of neural cells.
                                                                                                                                                                                                                      The invention relates to human secreted or transmembrane protein (I), their fragments and is encoded by specific complementary deoxyribonucleic acid (cDNA) inserts (II), where the protein is substantially free from other mammalian proteins. (I) are useful for preventing, treating or ameliorating a medical condition, especially immunological treatment or
                                                                                                                                   prevention of tumours. (I) exhibits activity relating to anglogenesis, cytokine, cell proliferation, cell differentiation, antiinflammatory, stem cell growth factor activity and activin or inhibin-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel secreted or transmembrane protein and protein, useful for diagnosis and treatment cancer, autoimmune diseases, bone disorders
                                                                                                                                                                                                                                                                                                                                                                                               Claim 37;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (LAVA/)

cc regeneration of nerve and brain tissue and is useful for the treatment of cc central and peripheral nervous system diseases and neuropathies, such as cc Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic cc lateral sclerosis. (I) is involved in chemotactic or chemokinetic cor lymphoid cell disorders, platelet disorders such as thrombocytopaenia cc and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth and in tissue repair, healing of burns, incisions, ulcers, cf for treating osteoporosis, osteoarthritis, bone degenerative disorders or cc periodontal disease. (I) is also useful for gut protection or cregeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, rheumatoid arthritis, clabetes mellitus, myasthenia gravis, allergic reactions and conditions, recombinant protein, as markers for tissues in which the corresponding contein is preferentially expressed and in gene therapy. The present cc sequence is that of a polynucleotide of the invention.                                                                                                                                                            The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of to the complementary strand of a polynucleotide with comprises one of coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises a 3'-end sequence complementary to a combination of complementary to a polynucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence, a sequence is selected from those defined in complementary and sequence is selected from those defined in complementary and complementary to the primers are useful for synthesising polynucleotides, comparation, and complementary and complementary without any specialised methods. AAH03166 to AAH1362 and CC AAH1563 to AAH1362 represent human amino acid sequences; AAH0446 to AAH1363 coff the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      27-AUG-1999; 99JP-0300253.

Common sequence is the coding sequence for human cestrogen and downregulated by oestrogen in mammary epithelial cells. The gene consistency and the strongen in mammary epithelial cells. The gene consistency are the strongen in mammary epithelial cells. The gene construction of the strongen in breast epithelial cells. It components in breast epithelial cells is component in normal mammary epithelial cells and in other human conformed in the strongen arm 17q. EDG1 mRNA expression is component in normal mammary epithelial cells and in other human conformed in the strongen cell growth, has an inhibitory effect consider induces breast cancer epithelial cells. Coestradiol, component cancer man breast cancer cells. Hexamethylene considers and solve of differentiation and apoptosis, upregulates EDG1 mRNA expression in breast cancer cells. The colon cancer in the strongen cancer cells. The colon cancer cells and polypeptides. In a convict of the strongen convicts and colon cancer is assayed for EDG1 transcript compared to have breast, testicular, prostate, uterine, convicts programs applies from an individual suspected of convenience or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived from the present converse or by RT-PCR using a primer derived
                  Polynucleotides encoding Estrogen Down-Regulated Gene 1 proteins, useful for the prevention, diagnosis and treatment of e.g. breast cancer, testicular cancer, prostate cancer, uterine cancer, cervical cancer, ovarian cancer and colon cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the coding sequence for human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               05-OCT-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WO200228879-A1

                                                     CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating conditions e.g. by protein or gene therapy. The genes are cC isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant) agonists are useful cC in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast CC and ovarian cancer and other cancers of the adrenal gland, bone, bone cC marrow, breast, gastrointestinal tract, liver, lung, or urogenital; CC (b) immune disorders e.g. Addison's disease, allergies, autoimmune cC disease, multiple sclerosis, rheumatoid arthritis and ulcerative cC colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and cepilepsy; and (f) infectious diseases such as viral, bacterial, fungal cC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly crown wife at the contents of the printed specification, but was obtained pot sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ş

The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for
               Bovine EST associated with lactation/muscle/fat

```
CC comprising an LMFD nucleic acid linked to a promoter and a 3' non-
CC transcription and addition of polyadenylated ribonucleotides to a 3' end
CC of the mRNA molecule; and (2) determining a level or pattern of a
CC molecule in a bovine cell or tissue comprising: (a) incubating a marker
CC nucleic acid (comprising any of the 5912 nucleic acid sequences or its
CC complement or fragment) with a complementary nucleic acid molecule
CC obtained from the bovine cell or tissue, where hybridisation between the
CC detection of the molecule; and (b) detecting the level or pattern of the
CC complementary nucleic acid, where the detecting the level or pattern of the
CC complementary nucleic acid, where the detection of the complementary
CC nucleic acid is predictive of the level or pattern of the molecule.
CC The LMFD nucleic acid is used for determining a level or pattern
CC of a molecule in a bovine cell or tissue. It is useful for genome
CC of constructs for use in cattle gene expression, or for generically
CC improving cattle. The present sequence is one of the 5912 bovine
CC Note: The present sequence was not shown in the smarification.
                                                                                                                                                                           US-09-972-758A-2 (1-359)

Screening for anti-neoplastic agent involves exposing cells chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature and gene Bet

Claim 1; SEQ ID 1880; 44pp; English.

The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical care agent to be tested for anti-neoplastic activity, determining a change in care expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in ABL6164 comprises a sequence (S) selected from 8447 sequences (given in ABL6164 comprises a sequence (S) selected from 8447 sequences (given in ABL6164 comprises a sequence (S) selected from 8447 sequences (given in ABL6164 comprises in sequence of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. MI can be used for screening can anti-neoplastic agent, and can be used for product which comprises the data collected with respect to the anti-neoplastic agent as a cresult of MI, and the data is sufficient to convey the chemical concertivature and/or properties of the agent. MI can be used in the cosponageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating ductal cancer, carcinoma, papillary carcinoma and Wilm's tumour.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ₽
                                                                            The invention relates to 446 newly isolated polynucleotide sequences. The activity of polynucleotides of the invention may be described as, vulnerary, neuropyctective, immunomodulator, cycostatic and anti-inflammatory. Compositions comprising nucleic acids of the invention are useful for treating a mammalian subject, or as nutritional sources or supplements. These are useful in gene therapy, particularly for treating wounds, burns or ulcers, Alzheimer's disease, Huntington's disease, amyotrophic lateral sclerosis, autoimmune disorders, cancer or inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABQ60788-ABQ61233 represent polynucleotides of the invention. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cytostatic; anti-inflammatory; gene therapy; nutritional supplement; wound; burn; ulcer; Alzheimer's disease; Huntington's disease; amyotrophic lateral sclerosis; autoimmune disorder; inflammation;

                                                                               AAM99166 to AAH99904 encode the human proteins given in AAM25225 to C AAW25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; cantiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; c cardiovascular; antianaemic; antiaggregant; haemostatic; antiaggregant; cardiovascular; antianaemic; antiaggregant; haemostatic; antiagthmatic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antigarkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rehumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, platelet disorders, thrombocytogaenia, wounds, burns, ulcers, osteromorpais associated immunodeficiency access allowed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          23-DEC-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US-09-972-758A-2 (1-359) x AAV87316 (1-342)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cacherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                       Drosophila
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  No.:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072)

                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                             CC constructs, recombinant viruses and recombinant cells comprising the control of the proteins, recombinant production of the proteins, and compositions, recombinant production of the proteins, and compositions comprising the inhibitors for the proteins, and compositions comprising the inhibitors for cadministration to an animal. The nucleic acids, and the proteins they cencode may be used in the prevention, treatment and diagnosis of diseases consisted with flea infestations. For example, the nucleic acids may be used to produce an HMT or HNC protein according to standard recombinant CC DNA methodology by inserting the nucleic acids into a host cell and culturing the cell to express the protein and HNC nucleic acids may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat flea or other homologous nucleic acid sequences in samples. They may also be used to study the expression and CC function of the proteins and their role in metabolism. The HMT and HNC proteins may be used as antigens in the production of specific cantibodies, and in assays to identify modulators (agonists and activity. The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides constitutes and protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides are the formation assay (ELISA). The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             US-09-972-758A-2 (1-359) x AAS79493 (1-1024)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags (for identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful for treating CC disgring of sites expressing (II). (I) and (II) are useful for treating CC disgring of sites expressing (II). (I) and (II) are useful for treating CC disgnostics, gene mapping, identification of mutations in CC diagnostics, gene mapping, identification of mutations (CC responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed contributions on furnity of the patent of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1024 BP; 238 A; 275 C; 327 G; 183 T; 1 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 1; SEQ ID No 15297; 103pp; English.

                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the coding sequence for human oestrogen CC downregulated by oestrogen in mammary epithelial cells. The gene CC was identified by yeast two-hybrid screenings for oestrogen cC was identified by yeast two-hybrid screenings for oestrogen cC was identified by yeast two-hybrid screenings for oestrogen cC was localised to chromosome arm 17q. EDG1 mRNA expression is compared to their human cC prevalent in normal mammary epithelial cells and in other human cC prevalent in normal mammary epithelial cells. Oestradiol, cC which induces breast cancer cell growth, has an inhibitory effect con EDG1 mRNA expression in breast cancer cells. The cc which induces breast cancer cell growth, has an inhibitory effect con EDG1 mRNA expression in breast cancer cells. The cc climent method, a test sample from an individual suspected of invention provides EDG1 polynucleotides and polypeptides. In a cc claimed method, a test sample from an individual suspected of convention, or known to have breast, testicular, prostate, uterine, cc using a polynucleotide that is complementary to the present sequence or by RT-PCR using a primer derived from the present convertion and the test sample contains or the level in a test sample indicates that the test sample contains or compared to the careasing the protein activity in the cells antibody. A claimed method for concernation, uterine, cervical or colon cancer cells involves increasing container. CC decreasing the proliferation of breast, prostate, testicular, or with EDG1 protein activity in the cells, either by contacting the cells antibre to contain cancer cells and encoding EDG1 protein, its fragment or functional equivalent, or with

The polynucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemacopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polynucleotide is also stated to be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Agostino

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, carticularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the collection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13623 and AAH3633 to AAH18742 represent human cDNA sequences; AAB92446 to AAH3633 represent human amino acid sequences; AAB92446 to AAH3633 represent human amino acid sequences; AAB92446 to AAH3632 crepresent oligonucleotides, all of which are used in the exemplification con the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end
